1 Object serialization for marshalling data in a Java interface to MPI   ■
Bryan Carpenter, Geoffrey Fox, Sung Hoon Ko, Sang Lim
June 1999 **Proceedings of the ACM 1999 conference on Java Grande**

Full text available: 🔲 pdf(688.78 KB)   Additional Information: full citation, references, citings, index terms

2 Java:introduction   ■
Vishal Shah
November 1997 **Crossroads**, Volume 4 Issue 2

Full text available: 🔲 html(37.68 KB)   Additional Information: full citation, index terms

3 Java virtual machine support for object serialization   ■
Fabian Breg, Constantine D. Polychronopoulos
June 2001 **Proceedings of the 2001 joint ACM-ISCOPE conference on Java Grande**

Full text available: 🔲 pdf(617.30 KB)   Additional Information: full citation, abstract, references, citings

Distributed computing has become increasingly popular in the high performance community.
Java's Remote Method Invocation (RMI) provides a simple, yet powerful method for
implementing parallel algorithms. The performance of RMI has been less than adequate,
however, and object serialization is often identified as a major performance inhibitor. We
believe that object serialization is best performed in the Java Virtual Machine (JVM), where
information regarding object layout and hardware communic ...

4 Ibis: an efficient Java-based grid programming environment   ■
Rob V. van Nieuwpoort, Jason Maassen, Rutger Hofman, Thilo Kielmann, Henri E. Bal
November 2002 **Proceedings of the 2002 joint ACM-ISCOPE conference on Java Grande**

Full text available: 🔲 pdf(120.05 KB)   Additional Information: full citation, abstract, references, index terms, review

In computational grids, performance-hungry applications need to simultaneously tap the
computational power of multiple, dynamically available sites. The crux of designing grid
programming environments stems exactly from the dynamic availability of compute cycles:
grid programming environments (a) need to be *portable* to run on as many sites as possible,
(b) they need to be *flexible* to cope with different network protocols and dynamically
changing groups of compute nodes, while (c) t ...
